Tree

YUDO

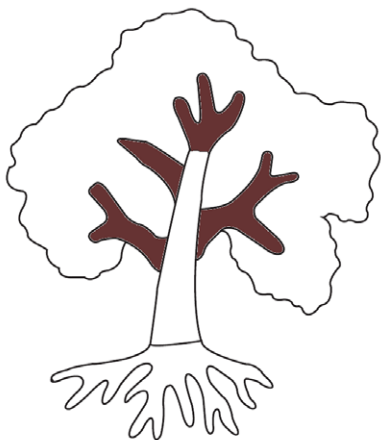

YUDO

A **tree**
is a plant that produces wood
and can grow very tall. It is
made up of roots, a trunk,
branches, and leaves.

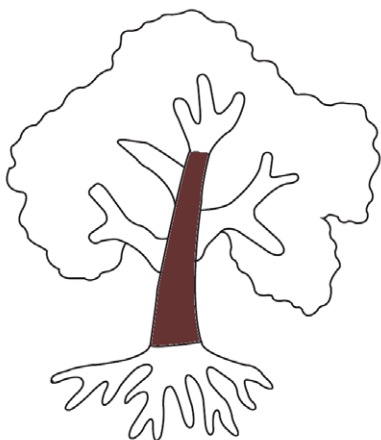

YUDO

YUDO

The **branches** grow from the trunk and support the leaves, flowers, and fruits. They also help spread the tree's canopy, capturing sunlight more efficiently.

YUDO

YUDO

The **trunk** is the main woody part of the tree. It helps the tree reach the necessary height to receive sunlight. It connects the branches to the roots, providing structural support for the canopy.

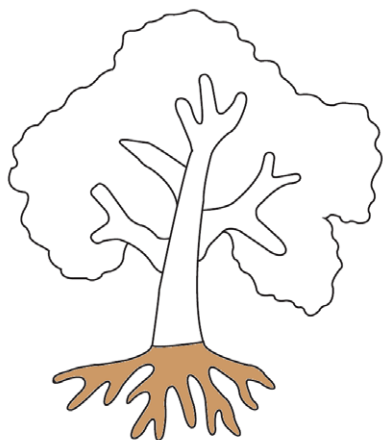

YUDO

The **leaves**
grow on the branches. They
have veins and produce food
for the tree using sunlight.

YUDO

YUDO

The **root**
is the part of the plant that is
underground. It absorbs water
and minerals to feed the tree
and keeps it firmly anchored
in the ground.
